SUMMARY

Second-year Computer Programming and Analysis student at Algonquin College (GPA 3.77, 3× Dean's Honours List). Builds and deploys full-stack applications using Java, Python, and JavaScript, applying OOP principles and design patterns to produce maintainable, well-documented code. Applied machine learning and data mining techniques to real-world datasets. Experienced collaborating in Agile teams, communicating with stakeholders, and independently learning new languages and frameworks to solve problems.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL, HTML, CSS, PHP, Bash/Shell, Go (Golang), Dart/Flutter, NoSQL

Frontend: Tailwind CSS, DOM Manipulation, Responsive Design, Wireframing, UX Best Practices

OOP & Design: Object-Oriented Design, Inheritance, Interfaces, Design Patterns (Factory, DAO, Singleton, Strategy, MVC, Observer, Front Controller), Layered Architecture

CS Fundamentals: Data Structures (ArrayList, HashSet, LinkedList, Generics, Slices), Big-O Analysis, Algorithms, Event-Driven Programming

Data & Analytics: Power BI, Altair/RapidMiner, MS Excel (Pivot Tables, ODBC), CRISP-DM, Decision Trees, K-Means Clustering, LOF Outlier Detection, Feature Engineering

Backend & Frameworks: Jakarta EE (JPA, EJB, JSF), Servlets/JSP, Hibernate, REST APIs, Django, React, JDBC, Maven, Fyne (Go GUI)

Testing: JUnit, Go Testing Package, Unit Testing, Integration Testing, Test Planning, Debugging

Databases: MySQL, PostgreSQL, Oracle, SQL Server, SQLite, MongoDB, Microsoft Access, ODBC, Neo4J

Tools & Workflow: Git/GitHub, Docker, Tomcat, Payara, VS Code, Eclipse, NetBeans, Android Studio, Postman, XAMPP, ZenHub, ClickUp

Other: Agile/Scrum, SDLC, UML, Technical Documentation, Stakeholder Presentations, MS Project, ProjectLibre

PROJECTS

Loyalty Dashboard Web App

Jan – Apr 2026

React · Django · SQLite · Amazon SES · Docker · Git/GitHub · ClickUp · ZenHub

- Built the merchant approval flow end to end for a startup client's loyalty dashboard: admin review queue, role-gated routing, and approval-state logic shared across admin and merchant sides
- Applied foundational programming knowledge to pick up Django and React in context
- Integrated Amazon SES to allow automatic status updates on new merchant sign-ups and approvals
- Delivered progress reviews to the client each sprint and translated their feedback into the next deliverable
- Contributed to both frontend and backend depending on sprint assignments, stepping into whatever the team needed

Excel-ODBC Data Reporting Tool

Feb 2026 – Apr 2026

SQL · ODBC · MS Excel · SQL Server · VBA (in progress)

- Designed a relational schema to support reporting workflows and geospatial data visualization
- Configured ODBC connections to pull live data from SQL Server into Excel dashboards
- Built Excel front-end with forms and dashboards, and introducing VBA automation for dynamic reporting
- Prepared technical documentation and stakeholder-facing presentation materials alongside the working tool

CSV Record Manager with GUI

Jan – Apr 2026

Go (Golang) · Fyne · MVC · Git/GitHub

- Self-taught Go and the Fyne GUI framework to build a full MVC desktop application
- Implemented CSV parsing, UUID-based record identification, in-memory data management, and a persistence layer
- Built a multi-page Fyne GUI with CRUD operations, menu navigation, and status feedback across all actions
- Followed godoc conventions and wrote unit tests, keeping the codebase self-documenting and validated
- Maintained Git branching across versioned project phases, each representing an iterative delivery milestone

Student Directory Web App

Jan – Mar 2026

Jakarta EE · JSF · JPA · Hibernate · EJB · MySQL · Payara

- Built a full-stack student directory web application using JSF for the presentation layer and JPA/Hibernate for persistence, deployed on Payara
- Implemented JPA entity annotations including @NamedQuery, @Version for optimistic locking, and @EntityListeners for audit tracking
- Designed EJB service layer and DAO interfaces, and applied custom JSF validators for email and phone input
- Completed full CRUD operations wired through the Jakarta EE stack from JSF view to database

Public Transit Fleet Management System

Jul – Aug 2025

Java · Servlets/JSP · MySQL · JDBC · Tomcat · MVC · Git/GitHub

- Architected a role-based user authentication system supporting two user types using abstract inheritance, a Factory pattern, and DAO interfaces backed by JDBC
- Built full CRUD vehicle management for a fleet entity with 6 tracked attributes, wiring the VehicleDAO interface through to the servlet and JSP presentation layer
- Designed relational database schemas, producing ER, physical model, and UML class diagrams as system documentation
- Coordinated parallel module development across a 4-person team using Git branching and pull requests

Public ROW Permit Duration Analysis

May – Aug 2025

RapidMiner · Python · CRISP-DM · MS Excel

- Applied CRISP-DM methodology to analyze a 76,000+ record public dataset of municipal permits, aiming to predict project durations
- Performed data cleaning, feature engineering, and attribute selection to prepare the dataset for modeling
- Built and evaluated predictive models using decision trees, K-Means clustering, and LOF outlier detection
- Compiled findings into a formal stakeholder report and presentation covering the full data mining cycle

Airline Booking Android App

Jun – Aug 2025

Flutter/Dart · SQLite (Floor) · JUnit · Git/GitHub

- Built an Android booking app with OOP design and encrypted local storage via EncryptedSharedPreferences
- Managed booking data using collection-based structures with full CRUD functionality
- Wrote JUnit tests covering valid and invalid input cases across multiple modules
- Optimized responsive layouts for consistent UX across screen sizes
- Used Git branching to divide work across the team and resolved merge conflicts during integration

Personal Portfolio Website

May 2025 – Present

HTML · CSS · JavaScript · PHP · Tailwind CSS · Docker · Git/GitHub

- Planned layout and user flow using wireframes and a sitemap before writing any code
- Rebuilt the UI after self-teaching Tailwind CSS, applying visual hierarchy and accessibility principles
- Containerized with Docker and deployed to production via Render connected to a GitHub repository
- Continuously iterated on features and design, applying new skills as I learned them

Agile Project Planning: Property Management System

May – Aug 2025

Agile · SDLC · UML · MS Project · MS Excel

- Led Agile planning for a property management system simulation across a 4-person team
- Conducted stakeholder analysis and requirements gathering
- Coordinated tasks, milestones, and iterative deliverables to meet project deadlines
- Produced core documentation: SRS, WBS, RAID log, and UML diagrams (use case, sequence, activity)

EDUCATION

Algonquin College, Ottawa, Canada

Sep 2024 – Present

Computer Programming and Analysis – Advanced Diploma (Expected 2027)

- GPA: 3.77 / 4.0 | 3× Dean's Honours List | Second-year (Winter 2026)
- Recent Relevant Coursework: Web Programming (HTML/CSS/JS/PHP), Mobile GUI Programming (Android), Systems Analysis & Design, Operating System Fundamentals (Linux/Shell Scripting), Network Programming (TCP/IP, Sockets), Enterprise App Programming (REST APIs, Jakarta EE), Advanced Database Topics (Oracle), Business Intelligence & Data Analytics, Programming Language Research (Go)

CERTIFICATIONS & ADDITIONAL

PCEP – Certified Entry-Level Python Programmer | Python Institute, Nov 2025

Languages: English (fluent), French (A2) | Available in Ottawa (on-site/hybrid/remote) | Canadian Citizen
